Play Aids

7 pages of transcribed play-aid content

Play Aid 2 — Action & Turn Sequence

Source: Compass Games BWN Play Aids PDF, page 2. Transcribed verbatim. Each H2 below is a candidate workflow-action chunk — when a player picks "Submarine action" in the app, surface the Submarines section; etc.

Margin annotation visible on the page: handwritten "Blue" / "9.1.3" markers (likely a personal cross-reference key).

Actions (overview)

Each unit action costs **one OPS** unless stated otherwise.

OPS Track Events — Trigger after both players move to/past

Fast

Fast Task Forces may move (not perform ASW) one Sea Zone. Ignore in day two. Resolve as per the ships event ignoring 2 & 4 and applying only to fast groups & zones they occupy.

Ships

1. All TFs may move one Sea Zone, resolve ASW, mark 'landing' or land if already marked 'landing'.
 - Roll 1 detection against any marked 'landing'.
 - Perform movement in order of detection status (Full/Partial/None, Soviet First).
 - NATO may dissolve TFs. Submarines may join a TF if not spent or 'on-patrol'.
 - 'On Patrol' units may react to enemy movement. 'On Patrol' air may move with a moving TF (check range).
2. Degrade detection not placed in step 1 (*Fast Ignore*)
3. RORSATs search
4. Air unit spent marker removed except for MP (*Fast Ignore*)
5. Resolve fighter vs. fighter combat due to movement of TF
6. Intrinsic detection units are attacked and then search

Repair

Remove one hit from each damaged facility.

Next Day

Both play 2nd card (Soviet first) then continue the game.

Submarines

- Diesels move 1, Nuclear moves 2
 - A soviet SSBN may take a nuclear sub with it, both spent.
 - Slow subs may move **or** attack **or** go 'on patrol'. If moving, move 2.
 - 1 sub move and attack
 - 1 sub attack and then move
 - 1 sub move and go 'on patrol'
 - 1 nuclear sub fast move 3 zones (*Optional: Noise — except for Akula, Oscar, Alfa, Sierra*)
 - 2–3 subs missile coordinate — all attacks to same zone and perform a missile attack.
-

Air Units

- 1 Maritime Patrol fly and attack or detect TF
 - If a detection is placed or upgraded, active player may then play one further action to attack a detected TF.
 - 1 MP / Fighter fly and go 'on patrol'.
 - 1+ Strike units fly an air strike. Fighters & tankers may fly for free and fighters may escort part-way.
-

Ships

- Form a new TF: **Cost 2**
- Move ships between TFs in the same zone: **Cost 1**
- Fire missiles with a TF: **Cost 1**

Automatic vs. facilities, may require a roll vs. other TFs.

Miscellaneous

- Repair a facility, remove a hit marker: **Cost 2**
 - Requires a 5+ roll if the damage level will change.
- De-Mine a port: **Cost 2**
 - Requires a 5+ if undamaged facility, otherwise 7+.
- Launch or move a RORSAT: **Cost 2**

- Destroyed on roll of a 1. Cannot stack until 4 aloft.
 - NATO may attack Cuba (See 21.5): **Cost 6**
 - Pass, if you have less ops than the enemy.
-

Use When Active (not an action)

- Use a First Strike Point to buy an effect.
 - Use a Soviet Spy.
 - Use an event on either of your OPS cards & mark used.
 - Play an event on a card in your hand at +2 cost.
 - Return an 'on patrol' air unit to its base, fresh.
-

Use At Any Time (not an action)

- Play a Reaction event from a card in your hand.
- On patrol units may attack enemy units moving through their zone:
 - Fighters vs Air; MP/Subs vs subs; MP vs Task Force Detection; Subs via ASW vs Task Forces.
- CAP may roll to attack air unit attacking their base.
 - Carriers defend all bases and TFs in their Sea Zone.
- Hydrophone detection when enemy subs move across.
- Draw a card if you have less than 3 cards in hand.
- Use a Soviet spy for First Strike evasion.

Play Aid 3 — Attacks on and by Submarines

Source: Compass Games BWN Play Aids PDF, page 3. Transcribed verbatim. Margin annotations: handwritten "Blue" with section refs §17.8, §17.9, §17.11, §17.9. Each H2 below is a workflow chunk — when the active player initiates ASW or a sub attack, surface the matching section.

Anti-Submarine Warfare

Roll anti-submarine warfare dice (minimum = 0 die). Resolve in order of lowest die to highest die.

- Die roll + Tactical Value = kills allowed
- Torpedo Tech — Soviet nuclear submarines Tactical Value = 1
- (Optional: MP & sub - sub rolls with +2 dice. Both spent)

Select any submarine targets with the D value equal or lower. Defender selects first target killed, attacker selects others.

Die roll	Effect
N 1 (NATO rolling)	One step loss in the Bastion (one-/roll)
N10	• Any submarine hit by the attacker or... • TF detected, may ignore all other dice and attack it or... • Soviet nuclear submarine take or use SSBN Hunting marker, not in Barents or Norwegian Seas (North 5–6 & 7–8) or Black or Baltic Seas.
Any payoffs <10	Any Soviet sub rolling: kill 1 step
Arctic	-1 die; All subs 6+ save or upgrade 6+ save to 4+. Ignore rocket Torpedo
Bad Weather	-1 die; -2 dice for MP units
Hydrophone Interruption	+1 die or roll 1 die and not spent (Optional: always one die, not spent, if submarine)
Non-Magnetic Subs	Cannot be killed by MP unless on N10
'Save' subs	Ignore any hit on a roll of a 6+

N = natural roll

Anti-Submarine Warfare by Task Forces

A Task Force may search for submarines instead of moving.

Use the TF ASW values and dice totals from the submarine vs. Task Force section but ignore the modification for a fast TF. Place a Poor detection on the TF after its search.

- If the TF rolls any two N1-2 results instead place a Good detection on the TF after its search.
- Resolve using the Anti-Submarine Warfare process. Ships with rocket torpedoes kill on doubles <10.
- Non-Magnetic units are hit on N10 only.

N = natural roll

Effects of hits by Submarines

Outcome	Effect
Convoys	Increase the hit marker by 1
Capital Ship	See Capital Ship Damage Procedure
Other unit	Cause a step loss

Hit Results

- **Hit:** Non-capital ship without Prairie Masker — step loss, chosen by attacker.
- **Amph / Convoy / Prairie Masker:** Non-capital ship step loss or hit on Amph/Convoy. Attacker selects first hit & others to Convoys or allows defender to allocate after the first.

Capital Ships: Carriers, Big Target, Huge Target, or Limited Ammunition

Submarine Launched Missiles vs. Task Force

Roll 1 die, 2 if 'Good detection' & use the best roll.

Roll	Effect
1–3	No attack
4–7	Long Range attack (<i>Optional: no attack for Charlie II</i>)
8–9	Short Range attack (<i>gives a bonus effect vs. SAMs</i>)
10	Short Range attack and submarine vs Task Force

- -2 DRM if diesel submarine and target TF is Fast
- -2 DRM for missile coordination per unit after the 1st (example: -2 DRM for 2 units, -4 DRM for 3 units)

Submarine vs. Task Force

Roll anti-surface dice (Minimum = 1). DR + Tactical value = results on sub vs TF table.

Detection	DRM
Good Detection	+1 die
Bad Weather	-1 die
Target TF is Fast	-1 die; -2 dice if diesel sub attacking

Submarine Attack Results

Die Roll	Result
1-5	—
6	Hit & (Super Heavy Torp)
7-9	Amph, Convoy or Prairie Masker
10+	2 Convoy (once) & (Super Heavy Torp)
N10	Hit vs any or as 10

N = natural roll

Set dice to the side for possible defender cancellation.

- Super Heavy Torp submarines rolling this result may move one row down (improve), alter the dice. Dice may also be used to kill escort submarines.
- If no hits, combat ends.
- If US or UK nuclear subs, (Torpedo tech — Soviets can also use) a double 1-6 may immediately resolve as hit.
- A double 7-10 may immediately resolve as PM/Amph/Can.

Task Force ASW

Unit	Value
Submarine	ASW x3

Unit	Value
Carrier	+2; +0 in Bad Weather
'On Patrol' MP	ASW; 1 in Bad Weather
Ship	ASW

Task Force ASW Defense

Calculate ASW total and then roll the ASW dice.

Task Force ASW Total

ASW	Dice/Tactical
0	0
1-2	2
3-5	2 + 1
6-8	3
9-12	3 + 1
13-17	4
18+	4 + 1

Up one row in Bad Weather

Up one row if TF is fast

Defender	Effect
Any double	TF owner may alter one die to an 8 and discard the other if any ships have rocket torpedoes and it is not Bad Weather.
Each 8+	TF owner may remove one submarine attack die of their choice. DR + tactical value = kills allowed. Non-magnetic subs killed on N10

Play Aid 4 — Task Forces: Detection, Missile Attacks and Damage

Source: Compass Games BWN Play Aids PDF, page 4. Transcribed verbatim. Margin annotation: handwritten "Blue" + section refs §14.1, §17.11. H2 chunks are workflow-ready: detection roll, missile launch, capital damage, etc.

Detection of TFs (by MP, RORSAT, Tattletale)

Roll number of TF detection dice. Resolve in order of lowest die to highest die.

Modifier	Effect
US CV detecting	2 dice each
Other CV detecting	1 die each
>2 enemy TF in the zone	+1 die per TF over 2
Soviet anti-submarine usage	-1 DRM per FSP

Die Roll	TF Detection
1–2	No Effect
3–5	Poor Detection — may upgrade any Poor detection to Good. Placed by TF owner unless upgrading.
6–8	Poor Detection — may upgrade any Poor detection to Good. Placed by rolling player.
9–10	Good Detection — placed by rolling player. Change to result '6' in Bad Weather. RORSAT change to '1'.

Detection Results

- **Poor Detection:** Reveal Amph, Convoys, 1 FTR of each type
- **Good Detection:** Reveal entire group

Missile Attacks on TFs vs. Task Forces

Soviet Task Force Missile Attack

- May fire yellow & black vs NATO Good detection TF in same zone, or vs Poor detection TF if Soviet TF is fast (or 6+).
- If the target TF has F-14's, roll 1 die if the attacking Soviet TF is poor or 2 dice if good detected & remove that number of missiles on 1's & 2's.
- White & red missiles by card only. *Except in Baltic Sea* — may fire vs Good detection TF in same zone. 1 ship only.
- Missiles of different colors can be attacked at the NATO players option but declare before the dice are rolled.

NATO Task Force Missile Attack

Anti-ship missiles by card event only. *Except in Baltic Sea* — may fire vs Good detection TF in same zone. 1 ship only.

Capital Ship Damage

Roll the number of dice indicated, and compare to the table.

Damage Dice to roll based on Weapon Used §14.1:

No. of Dice	Weapon
1	NATO missile, Soviet white missile from a ship Soviet red missile, Townsend missile (card).
2	Soviet yellow, black or submarine white missile Soviet or NATO torpedo.
3	Soviet torpedo from Super Heavy Torp submarine.
+1 die	Already damaged
+1 die	Each additional hit taken at the same time.

Target	Damaged	Sunk
Big Target	All dice 1–7	Any 8–10
Huge Target	All dice 1–9	Any 10

Damaged Carriers (CVs)

- Half of all air must roll & take a step loss on a 6+.

- Do not count as a carrier for sub vs Task Force attacks.
- No intrinsic detection capability.
- Only CAP may fly, with a modifier.
- May immediately break off & form their own TF with escorts from previous force, allowing them to retire.

SAM Resolution

A TF may fire with more SAMs than incoming missiles depending on the number of incoming missiles as follows:

Incoming Missiles	SAM shots allowed
1–5	# Incoming Missiles +1
6–10	# Incoming Missiles +2
11–15	# Incoming Missiles +3
16–20	# Incoming Missiles +4
21–25	# Incoming Missiles +5
26–30	# Incoming Missiles +6
31–35	# Incoming Missiles +7
36–40	# Incoming Missiles +8

TF owner rolls 1 die per SAM point, applying all DRMs.

DR	Effect
1–2	Miss
3–8	1 Hit
9–10	2 Hits

DRMs

- Soviet red & yellow missiles incoming: -2
- NATO missiles incoming: -1
- Bad Weather: -1
- Shooting at a non-yellow sub short range attack: -2
- White submarine-launched missiles: +2
- SAM Technology — Soviets SAMs rolling: +1

Incoming Missile Resolution

Roll one die per 2 missiles remaining, and a single die for an odd remaining missile. Apply DRMs.

2 Missiles

DR	Effect
1–7	1 Hit
8–10	2 Hits

1 Missile

DR	Effect
1–2	Miss
3–10	1 Hit

DRMs

- Good Detection: +1
- Bad Weather: -1

Missile Hit Selection

Roll two dice: Any N9 / N10 **first** hit allocated by attacker.

(Optional: Soviet yellow missiles roll three dice)

- NATO attacker allocates every 2nd hit (2–4–6–8–10–12)
- Soviet attacker allocates every 3rd hit (3–6–9–12–15)
- Missile Technology — Soviets may resolve as NATO

N = natural roll

Effect of Hits Caused

Each hit causes one step loss; causes 2 hits to convoys/amph or causes a damage roll against capital ships.

Play Aid 5 — Attacks by Fighters (CAP & Interception)

Source: Compass Games BWN Play Aids PDF, page 5. Transcribed verbatim. Margin annotation: handwritten "Brown" + reference §7.5. H2 chunks are workflow-ready for air combat resolution.

Air Units-Transit to a Zone

1. Check the round TO (but not Back from) the target for interceptions and resolve each in turn.
 2. Resolve any interception in the target zone.
 3. Resolve CAP by eligible units protecting the attacked target.
-

Air Units Intercepted when:

- Entering a zone with a fighter unit on patrol.
 - **Leaving** a zone with an enemy carrier.
 - **Overflying Denmark or Turkey.** The War Track Symbols show the number of dice to roll.
-

CAP may roll to attack when:

- A strike attacks a location being protected.
 - Carrier based fighters defend **every** Task Force in the Sea Zone and **every** land facility adjacent to the zone (the carrier does not have to be a target). Land based fighters protect land bases in **their** land area (but not Task Forces out at sea).
 - An air unit enters a Sea Zone with carrier based fighters prior to rolling to complete whatever mission it was sent to perform (eg: MP aircraft are attacked by CAP prior to attempting Task Force detection).
-

Fighter Combat vs Maritime Patrol (MP)

Includes vs Intrinsic carrier MP

Roll air-to-air dice -2 (min=1) with one fresh fighter unit.

Die roll + Tactical Value = kills allowed

Combat	Result
9+ vs. plane	-1 search, per die
N10 vs. plane	Step loss and no search
6+ vs. helo	-1 search, per die
N8-10 vs. helo	Step loss and no search

Air to Air Technology - Soviet +1 DRM

Intrinsic MPs are always helos except for US carriers.

N = natural roll

Escorted Air Strikes

- The defending player may roll with one defending fighter for each strike aircraft **or** each escorting fighter.
- All damages must be allocated to escorting fighters first except for N10 results.
- Any strike air killed by fighters in an escorted mission does not attack.

Fighters vs. Strike Aircraft (CAP & Intercept)

Roll all fighter dice with one fighter for each strike unit. CAP must come from target TF unless better fighters available. # of dice to roll is modified per unit rolling: (min = 1 die) DR + Tactical Value = kills allowed.

Roll Type	Modifier
Intercepting Fighter unit 'On Patrol'	-1 die
CAP 'Spent'	-2 dice
Detected by Interceptors	+1 die
Base damage light	-1 die
Base damage heavy	1 die only
Damaged Carrier (CV)	-1 die

Air to Air Technology - Soviet +1 DRM (*Optional: F-14 missile defence*)

Result	Effect
N10	CAP kill before launch

Result	Effect
N9	As per N10 if strike bombing
N1–2 with F-14 rolling	Kill this number of missiles

Interceptors

Killing or failing to kill by one pip causes the strike to count as 'detected by interceptors' from then on. An intercepted strike may abort after all fighters in the Sea Zone roll.

Saves Against CAP Kills

All kills by CAP (not by interceptors) may be saved based on the detection status of the base from which the fighter flew.

Detection	Save
Good detection on shooting carrier CAP	6+
CAP from any airfield	6+
Poor detection on shooting carrier CAP and not the strike location	8+

Fighters vs. Fighters (and escorted strikes)

Roll all fighter dice for both sides (max 1 v 1) (minimum 1 die) DR + tactical value = kills allowed

Result	Effect
Intercepting Fighter unit 'On Patrol'	-1 die
CAP 'Spent'	-2 dice
Detected by Interceptors	+1 die
Damaged Carrier (CV)	-1 die
Facility light damage	-1 die

Air to Air Technology - Soviet +1 DRM

Result	Effect
N10 (Defending Player)	Step loss on Strike unit

All step losses are selected by the rolling player. Fighters must be killed before strike units can be selected (*except N10*).

N = natural roll

05-fighters-cap-interception.md

Play Aid 6 — Attacking Land Targets

Source: Compass Games BWN Play Aids PDF, page 6. Transcribed verbatim. Margin annotations: handwritten "Brown" + reference §17.20, §17.24. H2 chunks are workflow-ready for land-strike workflows (bombing, cruise missiles, port damage, troops).

Air Units Bombing Land Targets

1 die per step, US CAGS get 1 free SEAD die per 2 CAGs.

SAM Suppression (SEAD)

Allocate dice to SEAD. These dice do not bomb.

Die Roll	Result
1–2	Miss, No Effect
3–5	-1 SAM value, <i>temporary</i>
6–8	-1 SAM value, place 1 hit
9–10	-2 SAM value, place 2 hits

SAM Attack

Roll a die per remaining SAM before the attackers bomb:

Die Roll	Result
6+	Ignore 1 bombing die
=>D	1 attacking step loss and ignore 1 bombing die

SAM Technology - Soviet +1 DRM

Bombing (air-to-ground)

Die Roll	Result
1–3	Miss
4–8	1 hit, 1 kill (collateral)

Die Roll	Result
9–10	2 hits, 2 kills (collateral)

DRM	Effect
+1	If some range to the target not used
-1	Bad Weather

Place the number of hits scored on each facility. Maximum of 5.

Collateral Damage

- 'Kills' cause damage to units stationed at the facility.
- Even kills are allocated by defender, odd by attacker.
- **Soviet Kola, Baltic, Black Sea:** NATO may force fighter casualties or Bear, Badger, Backfire (Soviet selects type).
- Either side may cause one RORSAT loss additionally (6+ Soviet selects) returning 3 turns from the current turn.

The Kola Peninsula

For each hit caused to the Kola Peninsula, the Soviet player takes one First Strike Point.

Facility Damage - Effects cumulative

Type	Damage Effects
Airbase (Light)	No air may fly, return to base on patrol interceptors & MP units and mark spent. Also applies a CAP modifier.
Airbase (Heavy)	All CAP is reduced to one die per unit. Do not remove spent markers on air units when ships move or at turn end.
Port (Light)	+1 hit to Convoys/Amphs arriving for delay. Subs moving from this port cost 2 OPS each. Applies -2 mine clearance penalty.
Port (Heavy)	+2 hits to Convoys/Amphs arriving for delay (instead of +1). +1 OPS to form a TF at this port.

Cruise Missile Attacks Vs. Land Targets

Soviet missiles (ship black & yellow, all submarine, all air).

No. of Missiles	No. of Dice
1–3	2 dice, keep lowest
4–7	1 die
8–12	2 dice
13+	3 dice

Soviet Green background missiles

May fly 2 zones to the target, roll # dice on counter(s).

NATO Green background missiles

May fly 1 zone to the target, roll # dice on counter(s).

SAM Suppression (SEAD)

Allocate dice to SEAD. These dice do not attack.

Die Roll	Result
1–2	Miss, No Effect
3–5	-1 SAM value, <i>temporary</i>
6–8	-1 SAM value, place 1 hit
9–10	-2 SAM value, place 2 hits

SAM Attack

Roll a die per remaining SAM before cruise missile attack:

Die Roll	Result
1–5	Miss, No Effect
6–7	Degrade one die, applying -2 DRM to attack
8–10	Shoot down one cruise missile point

SAM Technology - Soviet +1 DRM

Cruise Missile Attack

Roll a die per remaining cruise missile point:

Die Roll	Result	DRM	Cause
1–3	Miss	-1	Attacking Troops
4–6	1 hit	-1	Bad Weather
7–9	1 hit, 1 kill		
10	2 hits, 2 kills		

Place the number of hits scored on each facility. Maximum of 5.

Striking Soviet Troops (Europe South War Track, Norway, Denmark)

Roll escort fighter air-to-attacks: DR + Tactical Value needing 8+. The number of hits gives the # Soviet attacks:

Hits	Result
0–1	2 attacks vs each striking air unit
2–3	1 attack vs each striking air unit
4+	1 attack in total

Resolve each Soviet attack as follows:

Die	Result
6+	Ignores 1 bombing die
=>D	1 attacking step loss and ignore that die
N10	Soviet may choose to kill 1 step of fighters

Air-to-Air Technology - Soviet +1 DRM

Port Capabilities

Port Type	Capability
Minor Port	May rearm one submarine unit per turn May only rearm surface units of that nation
Major Port	May rearm any number of submarine units May rearm surface units

Play Aid 7 — Convoys, War Tracks, Mines, Repairing Ships & Nuclear Weapons

Source: Compass Games BWN Play Aids PDF, page 7. Transcribed verbatim. Margin annotation: handwritten "Grey". Each H2 chunk is workflow-ready for the relevant action.

Convoys

Hits	Result
0–2	Full Convoy (cancel Soviet advance)
3–4	Partial Convoy (two combine to a full Convoy)
5–6	—
7–9	Convoy Massacre
10	Additional Convoy Massacre & remove Convoy

Mines

Cause a hit on each 1-2 rolled. Odd hits to Convoy/Amph.

Type	Dice
Light	2 dice
Heavy	4 dice

Port Damage

Damage	Effect
Light Damage	+1 hit each Convoy
Heavy Damage	+2 hits each Convoy

Alternate Convoy Ports

Delivery to:	Effects
Belgian Port	Treat 5 hits as a Partial Convoy
Taranto	Treat 5 hits as a Partial Convoy
Turkish Port	Treat 5 & 6 hits as a Partial Convoy

Convoy Massacres

- **One marker:** No effect
 - **Two markers:** +2 Soviet OPS
 - **Three markers:** +1 NATO losses and return all markers.
-

War Tracks

- 3 hits on troops prevents one advance on the War Track this turn.
 - Remove 3 hits (only) at the end of each turn.
-

CAPTOR Mines

When a submarine moves into or through the zone, roll dice on counter as an ASW attack.

- Bad Weather: -1 die. Minimum = 0 die
 - N1 = flip/remove mines
-

Port Mines

Submarine enter/leave: 1 die light, 2 dice heavy

- Hit on 1-2. -1 die if Slow or Non-magnetic; minimum = 0 dice
- TF enter/leave: 2 dice light, 4 dice heavy
- Hit on 1-2. Odd hits to Convoy/Amph, others by TF owner

Mined Danish Straits: Units are hit on rolls of 1-4.

Nuclear Weapons at Sea

USSR submarines

USSR nuclear submarine taking a step loss caused by a NATO submarine's **N10** roll also causes a step loss to the attacking submarine.

Attacking surface ships with nuclear torpedoes

Soviet submarine hits have the following effects:

- **Convoys & amphs:** Mark two hits for the first 7–9 scored.
- **Non-capital ships:** No change.
- **Capital ships:** Destroyed or step loss if multiple ships.

Attacking surface ships with Anti-Ship Missiles

- Every 3rd missile through the SAMs is nuclear. Resolve nukes first, then resolve remaining non-nuclear missiles. Nuclear weapons automatically hit something.
- Roll a die, on an 8+ the Soviet player allocates it, otherwise the NATO player allocates it.
- Any hit kills the target counter entirely, except for a Convoy or Amph unit which takes three hits.

Soviet SAM Defenses

If the Soviet SAM level of a target is at least two, treat it as being worth +2 more than its current value against air units only (*not against cruise missiles*).

NATO Losses

6 Loss Points gives the Soviet player one Hammer & Sickle:

- 1 for a damaged US carrier (*if not already damaged*)
 - 2 for a sunk US carrier
 - +1 if the damaging/sinking is North of the SOSUS line
 - 1 for every 3rd Convoy Massacre marker earned
-

SAM Ammo for Limited Ammunition

- **Tico VLS** Fire 2–4 SAMS, mark "2–4 fired" SAM value now 4.
 - If fired 5+ mark no ammo.
- **Kirov/Kalinin** has 2 volleys total. 1 volley is 2+ shots.

- When out Kirov is SAM 1, Kalinin SAM 2.
-

Repairing Capital Ships

Roll when the ship arrives at a friendly major port and place on the Turn Track the indicated number of turns from the current turn.

Die Roll	Result
1–3	5 Turns
4–7	4 Turns
8–10	3 Turns

07-convoys-mines-tracks-repair-nukes.md

Play Aid 8 — Soviet Specific Rules: Spies, Invasions, First Strike Points, Technology

Source: Compass Games BWN Play Aids PDF, page 8. Transcribed verbatim. Margin annotations: handwritten "Grey" + reference §6.7.

NATO Boomer Hunting

The USSR player may claim the 'SSBN Hunting' marker:

- Via spy action
- By using a nuclear submarine **N10** ASW roll

The USSR player may spend the 'SSBN Hunting' marker:

- By using a nuclear submarine **N10** ASW roll

Roll on the following table with 1 die. Add the Tactical Value of the attacking submarine.

Die Roll	Result
1–3	Counter Attack: Soviet unit takes a step loss
4–7	Near Miss: Soviet receives 1 FSP
8–10	Sunk: Soviet receives 1 FSP & removes 3 sunk Soviet SSBN Payload value from the current total OR takes an extra FSP.

Soviet Spies

- Place a Poor detection on any Task Force.
 - Take the SSBN Hunting marker.
 - Re-roll up to three Anti-Submarine Warfare dice rolled by any Soviet unit (one re-roll per unit maximum).
 - Automatically succeed on all First Strike submarine evasion rolls in a single zone — even after rolling.
-

First Strike Points

- Anti-Satellite: place 1–2 in ASAT system boxes. While present, prevents NATO play of 'Whitecloud' and 'Snoopers detect raid' and applies DRM to NATO detection. Also, if two FSPs are present, removes one OPS from each NATO card. Remove one at the end of the turn on a 6+.
 - Take a step from the strategic reserve - 1 point/step.
 - Trigger the use of nuclear weapons at sea - 3 points.
 - Use battlefield nuclear weapons - 5 points (move a Front 2 boxes, reducing victory locations to 1 H&S. More Soviet stability 1 right. Prevents NATO use of nuclear weapons).
 - Prevent NATO use of battlefield nuclear weapons when entering the Ruhr space - 2 points or 4 if chemicals used.
-

Soviet First Strike Submarines

Any SSBN in or adjacent to a First Strike zone may roll to evade when an Anti-Submarine Warfare attack is declared. On a 6+ (8+ if spent) move the submarine and one non-diesel escort to an adjacent zone. The attacker is spent regardless of targets. The SSBN & escort are spent.

Amphibious Invasions

Number of dice available to NATO (minimum = 1)

Location	Turn 1–2	Turn 3–4	Turn 5+
Norway	4	3	2
	-1 die if invading Bodo		
Denmark	6	4	3

DRMs	Effect
-2 dice	If Soviet troops ashore in this location
-1 dice	If base at landing site is damaged

Each die causes a hit to an amph but can be cancelled if the Soviet player has the relevant capabilities within the Task Force. No capability can be counted more than once. Roll all dice and resolve starting with the lowest value.

Die Roll	Result
1–3	FAC: Cancel by expending 3 white (not vs Denmark) or red missiles. For each not cancelled, change the die to a 6 and resolve later.
4–5	Ships: Cancel by expending 2 black/yellow missiles. For each not cancelled, change the die to a 6 and resolve later.
6–8	Missile/Air Strike: Cancel by expending 4 SAMs. Cancel one if TF is not marked with a Good detection.
9	Mines: Cancel by taking a step loss on any ship.
10	Guns: Cancel one if Sverdlov is present.

Landing Troops

NATO landing in Oslo land only one troop unless Soviets are in the Orland box.

Landing	Place
with 0–2 hits	Place 2 Troops
with 3–4 hits	Place 1 Troop

Soviet landing at least 1 Troop in Bodo/Orland may place War marker in that box & roll for facility capture. Soviets landing in Orland - Bodo is also captured (heavy damage).

Capturing Facilities

Heavily damaged by default. Roll 1 dice per troop landed. Roll of 8+ to reduce damage by one level, place hit markers to match the facility damage box. May rebase 2 fighters & 2 strike. Mark strike units spent.

Soviet Technology

- **SAMs:** +1 DRM all SAM rolls - land and sea.
- **ASMs:** Resolve missile hit selection as NATO, allocating every 2nd hit instead of every 3rd hit.
- **Torpedoes:** All Soviet non-diesel submarines +1 tactical vs submarines, & Soviets may use Harpoon(sk).
 - **ECM:** Backfire & Bear-G receive 8+ save when airborne vs. any step loss. Ignore if a better save already applies.
- **Air-to-Air missiles:** +1 DRM on all air to air.

Ship Actions

5 actions in this group

Rule refs: (5.1.3.2) (8.1) (8.1.1) (8.1.4)

When does this come up?

A Task Force carrying Amphibious units sits in a zone with an Amphibious Landing symbol on the map. To get the troops ashore, the TF skips a movement beat to mark itself 'Landing', then resolves the landing on its next chance to move (5.1.3.2, 8.1.1). NATO does not use this for normal troop delivery — NATO delivers into friendly ports (5.1.3.5, 8.1.2) — except for Soviet-occupied Iceland (8.4.4).

Procedure

1. **Place the Landing marker.** During movement, instead of moving, place a 'Landing' marker on a TF in a zone with an Amphibious Landing symbol (5.1.3.2).
2. Roll a free Task Force Detection roll against each TF marking itself 'Landing' (5.1.2.1, 8.1.1).

PA-BLOCK · pa4:detection-of-tfs — Detection of TFs (Poor / Good states)

3. In Bad Weather, place a 'Moved' marker first; on the next chance to move you may choose to move normally or place the Landing marker (8.1.1).
4. **Next chance to move: resolve the landing.** Any submarines in port at the invaded location may sortie immediately and roll torpedo attacks vs the TF (7.3). Each rolling submarine costs the owning player 1 OPS and is marked Spent (8.1.1).
5. Determine dice and resolve the invasion sequence: cross-reference landing location × current turn for dice count, apply DRMs (Soviet troops ashore, damaged base), roll, and resolve threats starting with the lowest result (FACs → Ships → Missile/Air → Mines → Guns). Each threat can be cancelled by expending missiles, SAMs, or a step loss (8.1.1).

PA-BLOCK · pa8:amphibious-invasions — Amphibious Invasions

6. Determine troops landed by cross-referencing each Amphib's hit count (1-2 hits = 2 troops, 3-4 = 1, 5+ = 0). Place troops on the Invasion Track at the landing location (8.1.1, 8.1.4).

PA-BLOCK · pa8:landing-troops — Landing Troops

7. Resolve airfield captures: roll one die per troop landed against the facility (needing 8+ to reduce damage by a level) (8.1.4, 8.4.4).

PA-BLOCK · pa8:capturing-facilities — Capturing Facilities

8. Remove the Amphib unit(s) from the map.

act-ship-asw

ACTION

1 OPS

SHIP-ACTIONS

Rule refs: (7.2) (7.2.2) (7.2.2.1)

When does this come up?

A Task Force that wants to hunt a known submarine in its zone — instead of moving this beat — spends 1 OPS to roll ASW dice from its component ships (7.2.2). Doing so is loud: the TF is auto-marked with at least a Poor Detection and may even upgrade itself to Good Detection (7.2.2.1).

Procedure

1. Spend 1 OPS and declare the TF is conducting ASW in its current zone (7.2.2). Mark the TF with a Poor Detection marker immediately (7.2.2.1).
2. Per-ship ASW values: tally each ship's Anti-Submarine value, +2 per carrier (0 in Bad Weather), +ASW per On-Patrol MP in zone, and ASW $\times 3$ for any escorting submarine.

PA-BLOCK · pa3:task-force-asw — Task Force ASW (per-unit values)

3. Compute the ASW total and look up dice + Tactical Value. Move up one row in Bad Weather (Fast modifier is **ignored** for the ASW-instead-of-moving action per 7.2.2).

PA-BLOCK · pa3:task-force-asw-defense — Task Force ASW Defense (total + dice table)

4. Apply the TF-search rules: rocket torpedoes kill on doubles < 10 ; Non-Magnetic subs killed on N10 only; if you roll any two N1-2 results, upgrade your TF to Good detection (instead of Poor) (7.2.2.1).

PA-BLOCK · pa3:anti-submarine-warfare-by-task-forces — Anti-Submarine Warfare by Task Forces

5. Resolve hits per the standard ASW procedure (Tactical Value to each die, kill threshold = sub Defense value, N1 Bastion / N10 / save sub effects) (7.2.1).

PA-BLOCK · pa3:anti-submarine-warfare — Anti-Submarine Warfare (die roll table + DRMs)

6. The defender allocates non-N10 hits, then the attacker allocates remaining. Apply 'save' rolls for submarines that have them (6+ save).

Why and what to watch for

act-ship-asw.md

Rule refs: (5.1.1.3) (7.4) (7.4.1.2) (7.4.2)

When does this come up?

When a Task Force wants to attack a detected enemy TF with its ship-launched anti-ship missiles. White, red, and NATO blue ship-launched missiles do not use this action — those go only via card play (5.1.1.3). This is the action for the Soviet black 'Sandbox' and yellow 'Shipwreck' weapons firing.

Procedure

1. Spend 1 OPS and declare the attacking TF and the target TF, which must be in the same Sea Zone (7.4.1.2).
2. Resolve launch eligibility by missile color and detection level (7.4.1.2):
 - Soviet yellow/black: fire vs NATO Good-detected TF in same zone, or vs Poor-detected if the Soviet TF is Fast (or 6+).
 - Soviet white/red: card play only (Baltic exception applies).

PA-BLOCK · pa4:missile-attacks-on-tfs — Missile Attacks on TFs

3. Defender resolves SAMs — count SAM points, apply the SAM-shots-allowed limit based on incoming missile count, then roll one die per SAM with DRMs (missile color, weather, etc.) (7.4.2.1).

PA-BLOCK · pa4:sam-resolution — SAM Resolution

4. Resolve any remaining missiles: roll one die per 2 missiles, plus one for a remaining single (7.4.2.2).

PA-BLOCK · pa4:incoming-missile-resolution — Incoming Missile Resolution

5. Allocate hits using the hit-selection sequence (N9/N10 first by attacker, then alternating per side's allocation cadence) (7.4.2).

PA-BLOCK · pa4:missile-hit-selection — Missile Hit Selection

6. Apply hit effects: non-capital ships take one step loss per hit; Amphibs and Convoys take two hits per hit; capital ships roll on the damage table (7.4.2.3).

PA-BLOCK · pa4:capital-ship-damage — Capital Ship Damage

7. Mark expended ammunition: ships with (L) cruise/anti-ship missiles get a 'Cruise Missiles Fired' or 'AntiShip Missiles Fired' marker (9.5.3, 9.5.4).

act-ship-form-tf

ACTION

2 OPS

SHIP-ACTIONS

Rule refs: (5.1.1.1) (5.1.2)

When does this come up?

Surface ships can never move outside a Task Force, so getting ships from port to sea (or reorganizing forces already at sea) requires forming a TF (5.1.2). Both sides spend this action when they want to deploy a new group from a port, or break apart an existing force at sea into separate operational groups.

Procedure

1. Choose a port or a Sea Zone that already contains a friendly Task Force (5.1.1.1).
2. Take an available Task Force marker from the Task Force display and place it on the map. The British and northern French ports may be counted as the same port for this purpose.
3. Place ship counters from the port (or the existing TF) into the new TF's holding box, along with up to one non-SSBN nuclear submarine. Each TF must contain at least one Surface Unit (5.1.2).
4. Attach any Convoy and Amphibious units desired. If any unit has the (S) slow marker, the TF is Slow; otherwise it is Fast.
5. New TFs formed at sea inherit the detection status of the originating TF unless the new TF would have a higher status (5.1.1.2).

PA-BLOCK · pa4:detection-of-tfs — Detection of TFs (Poor / Good states)

Why and what to watch for

act-ship-form-tf.md

act-ship-move

ACTION

1 OPS

SHIP-ACTIONS

Rule refs: (5.1.3) (4.2.1.3) (5.1.3.1) (5.1.3.6)

When does this come up?

Ships only move as a Task Force group, and only when the SHIPS event triggers on the Operations Points Record Track (4.2.1.3). When the SHIPS event fires, both sides move every Task Force per the movement rules (5.1.3) — this is the main repositioning beat of the turn.

Procedure

1. Wait for the SHIPS event to be triggered on the OPS track (4.2.1.3). Both players' OPS markers reaching or passing the SHIPS box fires the event immediately after the current action.
2. Resolve movement in detection order: all Good Detected TFs first, then Poor Detected, then Undetected. Within each category, Soviet moves all TFs before NATO (5.1.3).

PA-BLOCK · pa2:ops-track-events — OPS Track Events (Ships event movement sequence)

3. For each TF, move up to one Sea Zone in any direction. TFs starting in Bad Weather zones place a 'Moved' marker instead and skip movement this beat (5.1.3.1).
4. When entering or leaving a port, some or all units may move into the adjacent port instead. Bad Weather is ignored when leaving a port (5.1.3.6).
5. Place the TF counter on the new zone border close to its previous zone, so the opponent can tell where it came from (5.1.3.8).
6. If a TF is marked 'Landing', resolve the Amphibious Landing instead of moving (8.1.1). See the Amphibious Landing action.

Submarine Actions

9 actions in this group

act-anytime-sub-asw-vs-tf

ANYTIME

SUB-ACTIONS

Rule refs: (4.2.3.2) (5.2.3) (7.2) (7.3)

When does this come up?

An enemy Task Force moves into a Sea Zone where you have a submarine On Patrol. The on-patrol sub can interrupt and attack the moving TF (5.2.3). The attack uses the standard 7.3 sub-vs-TF torpedo procedure.

Procedure

1. An enemy TF moves into your On-Patrol sub's zone. Declare the reaction (5.2.3, 4.2.3.2).
2. Calculate dice from the sub's Anti-Surface value plus modifiers (Good Detection +1 die, Bad Weather -1, Fast target -1 or -2 if diesel).

PA-BLOCK · pa3:submarine-vs-task-force — Submarine vs. Task Force (DRMs)

3. Roll attack dice, apply Tactical Value, and look up results.

PA-BLOCK · pa3:submarine-attack-results — Submarine Attack Results

4. If hits scored, calculate TF ASW total from its component units, then resolve the TF's defensive ASW roll.

PA-BLOCK · pa3:task-force-asw — Task Force ASW (per-unit values)

PA-BLOCK · pa3:task-force-asw-defense — Task Force ASW Defense (total + dice table)

5. Apply remaining hits.

PA-BLOCK · pa3:effects-of-hits-by-submarines — Effects of hits by Submarines

PA-BLOCK · pa3:hit-results — Hit Results (allocation rules)

6. Capital ships roll on the damage table.

PA-BLOCK · pa4:capital-ship-damage — Capital Ship Damage

7. The On-Patrol sub remains On Patrol unless the rules of the specific attack flip it (per 5.2.3, On Patrol units are not Spent by reacting unless the reaction text says so).

act-sub-attack-then-move

ACTION

1 OPS

SUB-ACTIONS

Rule refs: (5.2.1) (7.3) (7.3.1)

When does this come up?

A submarine already in the same zone as a detected enemy TF launches its torpedo attack first, then relocates. Same OPS cost as the move-then-attack variant; the order is the only difference (5.2.1).

Procedure

1. Spend 1 OPS and select one Fresh submarine already in the target TF's Sea Zone.
2. Resolve the torpedo attack per the standard procedure — declare target, calculate dice from the sub's Anti-Surface value, apply modifiers, roll, resolve TF ASW, then apply hits (7.3.1). See [Submarine moves then attacks](#) for the full step-by-step.

PA-BLOCK · pa3:submarine-vs-task-force — Submarine vs. Task Force (DRMs)

PA-BLOCK · pa3:submarine-attack-results — Submarine Attack Results

PA-BLOCK · pa3:task-force-asw-defense — Task Force ASW Defense

PA-BLOCK · pa3:effects-of-hits-by-submarines — Effects of hits by Submarines

3. After combat resolves, move the submarine using its normal movement allowance (5.2.2). Cross-zone Hydrophone Barrier reactions still apply (2.3.6).
4. Mark the submarine 'Spent'.

act-sub-attack-then-move.md

act-sub-attack

ACTION

1 OPS

SUB-ACTIONS

Rule refs: (5.2.1) (7.3) (7.3.1) (7.3.2)

When does this come up?

A submarine moves into a Sea Zone containing a detected enemy TF and resolves a torpedo attack against it (5.2.1, 7.3). The target TF must already be detected — Poor or Good — since submarine torpedo attacks need a known TF to engage.

Procedure

1. Spend 1 OPS and select one Fresh submarine.
2. Move the submarine into the target TF's zone using its normal movement allowance (5.2.2). Resolve any Hydrophone Barrier reactions on crossing (2.3.6).
3. Announce the target TF (must be detected) and calculate dice using the submarine's Anti-Surface value plus modifiers (Good Detection +1 die, Bad Weather -1 die, Fast target -1 die or -2 if diesel attacker).

PA-BLOCK · pa3:submarine-vs-task-force — Submarine vs. Task Force (DRMs)

4. Roll the dice, adding the submarine's Tactical Value. Apply (T) super-heavy torpedo row shifts. Look up results on the attack table.

PA-BLOCK · pa3:submarine-attack-results — Submarine Attack Results

5. If no hits, combat ends — the sub failed to contact. Otherwise, set the hit dice aside and proceed.
6. **Escort submarine handling:** dice high enough to kill an escort sub may be spent now to do so (escort still gets save rolls). Then, if the attacking sub rolled a double and has SSM capability, it may launch a missile attack — all US/UK nuclear subs and (with Torpedo Technology) Soviet nuclear subs qualify.
7. Calculate the TF's ASW total from its component units (each ship's ASW value, +2 per carrier (0 in Bad Weather), each MP On Patrol's ASW value, escort sub ASW ×3).

PA-BLOCK · pa3:task-force-asw — Task Force ASW (per-unit values)

8. Look up the ASW total to get dice + Tactical Value. Move up one row in Bad Weather; move up one row if TF is Fast (7.3.1).

PA-BLOCK · pa3:task-force-asw-defense — Task Force ASW Defense (total + dice table)

9. Roll TF ASW dice. Each die $\geq$ submarine's Defense value causes a step loss; (N) subs only die on a natural 10. Apply rocket torpedo special (TF may swap a double to an '8' if any ship has (R) and not Bad Weather).
10. For each TF ASW die $\geq$ 8, the TF may select and discard one of the submarine's hit dice — denying the hit (7.3.1 step 9).
11. Resolve remaining submarine hits: triage each by target type, then apply step loss / capital-ship damage roll as appropriate.

PA-BLOCK · pa3:effects-of-hits-by-submarines — Effects of hits by Submarines

PA-BLOCK · pa3:hit-results — Hit Results (allocation rules)

12. Capital-ship hits roll on the damage table. UK Illustrious carriers also get an 8+ save against any torpedo hit (7.3.3).

PA-BLOCK · pa4:capital-ship-damage — Capital Ship Damage

13. Mark the submarine 'Spent'.

Why and what to watch for

act-sub-detect

ACTION

1 OPS

SUB-ACTIONS

Rule refs: (5.2.1) (6.1) (6.1.1)

When does this come up?

A submarine moves into a zone with an Undetected (or Poor-detected) enemy TF and uses its sensors to upgrade the detection state — typically as a setup for a follow-up attack by the same submarine (via the move-then-attack action) or another unit that needs a Good detection (5.2.1).

Procedure

1. Spend 1 OPS and select one Fresh submarine.
2. Move into the target zone using the sub's movement allowance (5.2.2). Resolve Hydrophone Barrier reactions if any (2.3.6).
3. Attempt detection on the enemy TF in the zone. Subs detect TFs only during an ASW attack via a natural 10 (see 7.2.1's N10 option 1). For a pure detection action, resolve per the detection procedure for the sub type.

PA-BLOCK · pa4:detection-of-tfs — Detection of TFs (by MP, RORSAT, Tattletale)

4. If detection succeeds, place a Poor Detection marker, or upgrade an existing Poor to Good (6.1.1).
5. Mark the submarine 'Spent'.

Why and what to watch for

act-sub-detect.md

Rule refs: (5.2.1) (7.4) (7.4.1.1) (7.4.2)

When does this come up?

A nuclear submarine launches a missile attack against a TF (7.4) or a land facility (7.5) in its current zone. Per 7.4.1.1, submarine-launched missile attacks require the attacker to be in the same zone as the target — range is expressed by movement, not by the missile's reach.

Procedure

1. Spend 1 OPS and select one Fresh nuclear submarine in the target's Sea Zone.
2. Roll 1 die (2 dice if Good Detection — use best). Apply DRMs (-2 if diesel attacker vs Fast TF; -2 per additional coordinating sub per 5.2.4). Look up result for No Attack / Long Range / Short Range / Short Range + Torpedo.

PA-BLOCK · pa3:submarine-launched-missiles-vs-task-force — Submarine Launched Missiles vs. Task Force

3. Defender resolves SAMs against the incoming missiles (7.4.2.1).

PA-BLOCK · pa4:sam-resolution — SAM Resolution

4. Resolve any remaining missiles (roll one die per 2 missiles, plus one for a remaining single) (7.4.2.2).

PA-BLOCK · pa4:incoming-missile-resolution — Incoming Missile Resolution

5. Allocate hits using the hit-selection sequence (N9/N10 first by attacker, then alternating per side's cadence).

PA-BLOCK · pa4:missile-hit-selection — Missile Hit Selection

6. Apply hit effects: non-capital ships one step per hit; Amphibs/Convoys two hits per hit; capital ships roll on the damage table (7.4.2.3).

PA-BLOCK · pa4:capital-ship-damage — Capital Ship Damage

7. On a 10+ result, also resolve a 7.3 torpedo attack from the same submarine immediately afterwards.
8. Mark the sub 'Spent' and apply 'Cruise Missiles Fired' marker if applicable (9.5.3).

Why and what to watch for

`act-sub-missile-3-zones.md`

Rule refs: (5.2.4) (7.4) (7.4.1.1)

When does this come up?

Two or three submarines pool a coordinated missile attack against a single Task Force or facility. All subs must move to the same zone and resolve as one attack. Costs 1 OPS per participating submarine (so 2 or 3 total) (5.2.4).

Procedure

1. Spend 1 OPS per submarine participating (2 or 3 total) and select 2-3 Fresh submarines.
2. Move all participating subs to the same Sea Zone — the target's zone (5.2.4, 7.4.1.1). Resolve any Hydrophone reactions on crossings.
3. Designate one as the primary attacker. The rest contribute missiles and apply a -2 DRM each to the launch roll (5.2.4). Resolve a single launch roll for the combined attack — Long Range / Short Range / Short Range + Torpedo (or no attack).

PA-BLOCK · pa3:submarine-launched-missiles-vs-task-force — Submarine Launched Missiles vs. Task Force

4. Add all participating subs' missile counts together for one combined incoming volley. Defender resolves SAMs against it (7.4.2.1).

PA-BLOCK · pa4:sam-resolution — SAM Resolution

5. Resolve any remaining missiles (7.4.2.2).

PA-BLOCK · pa4:incoming-missile-resolution — Incoming Missile Resolution

6. Allocate hits.

PA-BLOCK · pa4:missile-hit-selection — Missile Hit Selection

7. Apply hit effects per 7.4.2.3. Capital ships roll on the damage table.

8. Mark all participating subs 'Spent' and apply Cruise Missiles Fired markers as needed (9.5.3).

act-sub-move

ACTION

1 OPS

SUB-ACTIONS

Rule refs: (5.2) (5.2.1) (5.2.2)

When does this come up?

Repositioning a single fresh submarine. Submarine actions all cost 1 OPS unless specified and use a single submarine that must be fresh (5.2). A submarine that takes an action is marked 'Spent' (or 'On Patrol' if it took the patrol action) for the rest of the turn.

Procedure

1. Spend 1 OPS and select one Fresh submarine.
2. Move the submarine according to its type:
 - Diesel (D): 1 zone only, no Fast move (5.2.2).
 - Small slow Diesel (S): 1 zone only.
 - Nuclear-powered: 2 zones, or 3 zones via a Fast move (5.2.1).

PA-BLOCK · pa2:submarines — Submarines (action menu + movement allowances)

3. A moving Soviet SSBN may take one non-diesel submarine with it for no extra cost. Both are marked 'Spent'. See [Soviet SSBN takes a nuclear sub along](#) (5.2.2, 2.2.7.1).
4. If the submarine crosses a Hydrophone Barrier, the opposing player may resolve a Hydrophone reaction (2.3.6). See [Hydrophone Barrier reaction](#).
5. After movement, mark the submarine 'Spent'.

See also

Why and what to watch for

act-sub-on-patrol

ACTION

1 OPS

SUB-ACTIONS

Rule refs: (5.2.1) (5.2.3)

When does this come up?

A submarine moves to a zone where the opponent is likely to send units later in the turn, then sets up to react. Going On Patrol arms the sub to interrupt enemy movement through its zone for the remainder of the turn (5.2.3).

Procedure

1. Spend 1 OPS and select one Fresh submarine.
2. Move the sub to a zone within its movement allowance instead of attacking (5.2.3). Resolve any Hydrophone Barrier crossings (2.3.6).
3. Place the 'On Patrol' marker on the submarine.
4. For the remainder of the turn, this On Patrol sub can be triggered as a Use-At-Any-Time reaction:

PA-BLOCK · pa2:use-at-any-time — Use At Any Time (reactions available to On-Patrol units)

- Interrupt a moving enemy submarine and roll ASW against it. See [On-Patrol MP attacks a crossing submarine](#) — same trigger, sub version.
 - Roll a torpedo attack against a moving TF entering the zone. See [On-Patrol Submarine ASW vs moving TF](#).
5. Only one On Patrol unit per zone may react against a given moving unit (5.2.3).

See also

- [On-Patrol Submarine ASW vs moving TF](#)
- [On-Patrol MP attacks a crossing submarine](#)
- [MP or Fighter goes On Patrol](#)
- Related rules: (5.2.1), (5.2.3), (4.2.3.2)

Why and what to watch for

Rule refs: (2.2.7.1) (5.2.2)

When does this come up?

A Soviet SSBN ('Boomer') wants to relocate with protection. Per the stacking exception in 2.2.7.1, a Task Force may only have one escorting submarine and it must be a nuclear attack sub (not diesel, not an SSBN). The SSBN movement rule (5.2.2) extends this to subs travelling together: a moving Soviet SSBN may take one non-diesel submarine with it for no extra OPS cost.

Procedure

1. Spend 1 OPS for the SSBN's move action and select a Fresh Soviet SSBN.
2. Select one Fresh non-diesel, non-SSBN submarine (a nuclear attack sub) that starts in the same zone as the SSBN (5.2.2).
3. Move both subs together using the SSBN's movement allowance (typically 2 zones for nuclear, or 3 on a Fast move).
4. Resolve any Hydrophone Barrier reactions on each crossing — the NATO player may roll against either sub crossing (2.3.6).
5. Mark both submarines 'Spent' at the end of the move.

act-active-return-on-patrol-air

ACTIVE

AIR-ACTIONS

Rule refs: (4.2.2.4) (5.3.4.1) (5.3.4.2)

When does this come up?

When it's your turn to play an action, you may rebase a Fresh On-Patrol Air Unit without spending OPS. This is a "use when active" option — it does not count as an action and costs nothing (4.2.2). Useful for pulling an On-Patrol unit back to base so it can be used in an action next time it's your turn.

Procedure

1. On your action, declare you are returning an On-Patrol Air Unit (4.2.2.4).

PA-BLOCK · pa2:use-when-active — Use When Active (not an action)

2. The unit must currently be Fresh (not already Spent). Remove its 'On Patrol' marker and place it back at its base 'Fresh' (5.3.4.1, 5.3.4.2).
3. The unit is now available to take a normal action on a future activation.

act-air-mp-fly-attack · ACTION · 1 OPS · AIR-ACTIONS

Rule refs: (5.3) (5.3.1) (5.3.2) (6.1) (7.2)

When does this come up?

A Maritime Patrol unit flies a one-shot mission into a Sea Zone within its range — either to hunt a known submarine (ASW) or to attempt detection of an enemy Task Force (5.3, 5.3.1). The MP must be Fresh and the action costs 1 OPS per flying unit (escorting fighters and tankers fly free, see [Air Strike](#)).

Procedure

1. Spend 1 OPS and select one Fresh MP unit at a base.
2. Trace the route from the base to the destination Sea Zone — must remain within range (5.3.2).

PA-BLOCK · pa5:air-units-transit-to-a-zone — Air Units · Transit to a Zone

3. Check the route TO the target zone for enemy interceptions (On Patrol fighters, en-route carrier CAP), then resolve any interception in the target zone itself (5.3.2, 5.3.3.1).

PA-BLOCK · pa5:air-units-intercepted-when — Air Units Intercepted when:

4. Resolve CAP from carriers or land bases protecting the target (5.3.3.2).

PA-BLOCK · pa5:cap-may-roll-to-attack-when — CAP may roll to attack when:

5. If the MP survives, resolve its chosen mission:
 - **ASW vs known submarine:** roll ASW dice per the standard ASW procedure (7.2.1). MP units suffer -2 dice in Bad Weather.

PA-BLOCK · pa3:anti-submarine-warfare — Anti-Submarine Warfare (die roll table + DRMs)

- **TF detection attempt:** roll for detection per 6.1.

PA-BLOCK · pa4:detection-of-tfs — Detection of TFs (by MP, RORSAT, Tattletale)

6. **Free follow-on:** if the detection was placed or upgraded, the active player may take one further action of any type — but it must result in an attack against the newly detected TF (5.3.1).
7. Mark the MP unit 'Spent' and return it to base.

act-air-mp-on-patrol

ACTION

1 OPS

AIR-ACTIONS

Rule refs: (5.3.4) (5.3.4.1) (5.3.4.2)

When does this come up?

Putting an MP or land-based Fighter into a zone where it will react later in the turn. Carrier-based Air Units cannot perform this mission type — they must protect their carrier (5.3.4.2). Only MP or Fighter units may go On Patrol (5.3.4).

Procedure

1. Spend 1 OPS and select one Fresh MP or Fighter unit.
2. Move the unit to a Sea Zone within its range (5.3.4).
3. Enemy fighters in the zone may intercept and resolve CAP before the unit arrives on station (5.3.4.1, 5.3.3).

PA-BLOCK · pa5:air-units-intercepted-when — Air Units Intercepted when:

4. Place the 'On Patrol' marker on the unit. It is now armed to react for the rest of the turn:

PA-BLOCK · pa2:use-at-any-time — Use At Any Time (reactions available to On-Patrol units)

- **MP On Patrol** (5.3.4.1) can interrupt enemy submarines crossing the zone (roll ASW), or roll to detect a moving Task Force passing through. After reacting, the MP flips to Spent and returns to base.
 - **Fighter On Patrol** (Interception, 5.3.4.2) attacks any Air Units entering its zone without spending the unit.
5. MP On Patrol also gives an additional defensive bonus to friendly TFs in the same zone (built into the combat tables) (5.3.4.1).

act-air-strike

ACTION

1 OPS

AIR-ACTIONS

Rule refs: (5.3.5) (5.3.6) (7.1.4) (7.4.1.3) (7.5.1)

When does this come up?

One or more Strike units fly to a target TF or facility and attack with missiles, bombs, or both. Fighters fly as escort and Tankers extend range — both fly free of OPS cost when part of an air strike (5.3, 5.3.5, 5.3.6).

Procedure

1. Spend 1 OPS per Strike unit being flown (Fighters and Tankers fly free with the strike).
2. Group strikes: units from different bases fly separate strikes (carriers in the same zone may fly as one strike). Strikes against different targets in the same zone are separate strikes (5.3.5).
3. Trace the path from base to target zone, respecting unit range. Tankers may extend a Strike's range: each 2-step Tanker extends one Strike by 2 zones or two Strikes by 1 zone; a 1-step Tanker extends one by 1 (5.3.6).

PA-BLOCK · pa5:air-units-transit-to-a-zone — Air Units · Transit to a Zone

4. Resolve all en-route interceptions in order along the path TO the target (5.3.2, 5.3.3.1).

PA-BLOCK · pa5:air-units-intercepted-when — Air Units Intercepted when:

5. Resolve CAP defending the target (carrier-based fighters defend every TF in zone + adjacent land facilities; land fighters defend their bases).

PA-BLOCK · pa5:cap-may-roll-to-attack-when — CAP may roll to attack when:

6. Resolve the air-to-air resolution based on the strike type:

- Unescorted strike: each defending Fighter rolls air-to-air dice per Strike unit (7.1.4).

PA-BLOCK · pa5:fighters-vs-strike-aircraft — Fighters vs. Strike Aircraft (CAP & Intercept)

- Escorted strike: roll defending fighters against escorts first, allocate kills to escorts first except N10 (7.1.4.4).

PA-BLOCK · pa5:escorted-air-strikes — Escorted Air Strikes

PA-BLOCK · pa5:fighters-vs-fighters — Fighters vs. Fighters (and escorted strikes)

- Apply Interceptor "detected" status forward and CAP-kill save rolls.

PA-BLOCK · pa5:interceptors — Interceptors

PA-BLOCK · pa5:saves-against-cap-kills — Saves Against CAP Kills

7. **vs TF target:** surviving Strike units launch missiles automatically (7.4.1.3). Defender resolves SAMs, then incoming missile resolution, then hit selection, then damage.

PA-BLOCK · pa4:sam-resolution — SAM Resolution

PA-BLOCK · pa4:incoming-missile-resolution — Incoming Missile Resolution

PA-BLOCK · pa4:missile-hit-selection — Missile Hit Selection

PA-BLOCK · pa4:capital-ship-damage — Capital Ship Damage

8. **vs land target:** each remaining Strike step gets one bombing die (US CAGs also get 1 free SEAD die per 2 CAGs). Allocate to SEAD vs bombing, resolve SAM suppression, then SAM attack, then bombing.

PA-BLOCK · pa6:air-units-bombing-land-targets — Air Units Bombing Land Targets

PA-BLOCK · pa6:sam-suppression-sead-bombing — SAM Suppression (SEAD) · vs Bombing

PA-BLOCK · pa6:sam-attack-bombing — SAM Attack · vs Bombing

PA-BLOCK · pa6:bombing-air-to-ground — Bombing (air-to-ground)

9. Apply collateral step losses, facility damage cumulative effects, and Kola First Strike Points if applicable (7.5.3, 7.5.4).

PA-BLOCK · pa6:collateral-damage — Collateral Damage

PA-BLOCK · pa6:facility-damage — Facility Damage · Effects cumulative

PA-BLOCK · pa6:the-kola-peninsula — The Kola Peninsula

10. Mark Strike units, escorting Fighters, and Tankers 'Spent'. Apply Cruise Missiles Fired markers per 9.5.3.

· ANYTIME

· AIR-ACTIONS

Rule refs: (4.2.3.3) (5.3.3.2) (7.1.1.2) (7.1.4)

When does this come up?

Every Fighter unit at home base is always performing a CAP (Combat Air Patrol) mission, even when 'Spent' — except for On-Patrol interceptors elsewhere (4.2.3.3). When an enemy strike arrives in a zone protected by CAP, the defending fighter rolls air-to-air dice without spending OPS.

Procedure

1. An enemy Strike (or in some cases MP or interceptor) arrives in a zone protected by your CAP. Determine eligibility (5.3.3.2):

- **Land-based fighters** protect land bases in their own zone (but not TFs at sea).
- **Carrier-based fighters** defend every TF in the carrier's Sea Zone and every land facility adjacent to that zone (the carrier itself does not have to be the target).

PA-BLOCK · pa5:cap-may-roll-to-attack-when — CAP may roll to attack when:

2. Resolve CAP per the air-to-air procedure. One Fighter unit may roll its printed air-to-air dice for each enemy Strike unit. Apply mission modifiers (CAP Spent -2 dice, Detected by Interceptors +1, base damage, damaged CV, etc.) (7.1.1.2, 7.1.4).

PA-BLOCK · pa5:fighters-vs-strike-aircraft — Fighters vs. Strike Aircraft (CAP & Intercept)

3. Add the fighter's Tactical Value to each die. Apply the Soviet 'Air to Air Missile' Technology DRM if held. Resolve natural rolls: N10 kills a Strike step before weapon delivery; N9-10 kills before bomb release; F-14 N1-2 shoots down enemy missiles.
4. Apply save rolls based on the detection state of the firing fighter's base (8+ for Poor-detected carrier CAP if not at strike location; 6+ otherwise) (7.1.4.3).

PA-BLOCK · pa5:saves-against-cap-kills — Saves Against CAP Kills

5. Surviving enemy Strike units proceed to deliver weapons.
6. CAP fighters are NOT marked Spent by performing CAP — they remain available to fight the next strike that arrives at the same base.

Why and what to watch for

`act-anytime-cap.md`

Rule refs: (4.2.3.2) (5.3.3.1) (5.3.4.2) (7.1.4)

When does this come up?

An enemy Air Unit (Strike, escorted Strike, MP, or fighter) enters or passes through a zone where you have a Fighter unit On Patrol. The on-patrol fighter rolls air-to-air dice to attack without being marked Spent (5.3.3.1, 5.3.4.2). This trigger fires automatically whenever the enemy's path crosses your patrol zone (5.3.2 transit sequencing).

Procedure

1. The enemy declares an air mission. When their path enters your On-Patrol fighter's zone (en route to or arriving at the target), pause to resolve interception (5.3.2, 5.3.3.1).

PA-BLOCK · pa5:air-units-intercepted-when — Air Units Intercepted when:

2. Resolve based on the target type:

- **vs MP:** roll printed dice minus 2 (min 1). Step loss on 9+ vs plane (N10 = step + no search); 6+ vs helo (N8-10 = step + no search) (7.1.2).

PA-BLOCK · pa5:fighter-combat-vs-maritime-patrol — Fighter Combat vs Maritime Patrol (MP)

- **vs unescorted Strike:** roll printed air-to-air dice per Strike unit, applying mission/damage modifiers. N10 kills before weapon delivery; N9 also kills if bombs-only; F-14 N1-2 shoots down enemy missiles (7.1.4, 7.1.4.1, 7.1.4.2).

PA-BLOCK · pa5:fighters-vs-strike-aircraft — Fighters vs. Strike Aircraft (CAP & Intercept)

PA-BLOCK · pa5:interceptors — Interceptors

- **vs escorted Strike:** defender rolls fighters against escorts first; kills go to escorts first except N10. Then resolve fighter-vs-fighter (7.1.4.4).

PA-BLOCK · pa5:escorted-air-strikes — Escorted Air Strikes

PA-BLOCK · pa5:fighters-vs-fighters — Fighters vs. Fighters (and escorted strikes)

- **vs Fighter** (no strike): both sides declare avoid-or-engage in order; if engaged, resolve simultaneously (7.1.3).
3. Apply hits and proceed to the next interception zone (if any), then CAP at the target (5.3.2).
 4. The intercepting fighter is NOT marked Spent — interception is free (5.3.4.2).

Why and what to watch for

act-anytime-fighter-vs-air.md

Rule refs: (4.2.3.2) (5.3.4.1) (7.2) (7.2.1)

When does this come up?

An enemy submarine moves into or through a Sea Zone where you have an MP On Patrol. The MP can interrupt the move and roll a full ASW attack against the submarine (5.3.4.1). After reacting, the MP flips to Spent and returns to base.

Procedure

1. An enemy submarine moves into or through the MP's patrol zone. Declare the MP is reacting (5.3.4.1).
2. Resolve a standard ASW attack: roll the MP's ASW dice, add Tactical Value, apply DRMs (Bad Weather -2 for MP, Arctic ice -1, Hydrophones +1). Each die $\geq$ the target submarine's Defense value causes a step loss. (N) submarines are only killed on a natural 10 when an MP is rolling (7.2.1).

PA-BLOCK · pa3:anti-submarine-warfare — Anti-Submarine Warfare (die roll table + DRMs)

3. Apply N10 effects (option to detect a TF in zone, destroy any sub step, etc.).
4. The defender applies non-N10 hits first, then the attacker allocates the rest. Apply sub 'save' rolls.
5. Flip the MP's On Patrol marker to Spent and return it to base (5.3.4.1).

Why and what to watch for

Rule refs: (4.2.3.2) (5.3.4.1) (5.3) (6.1)

When does this come up?

An enemy Task Force moves into or through the Sea Zone where you have an MP On Patrol. Instead of an ASW attack, the MP rolls to detect or upgrade detection on the moving TF (5.3.4.1). Same cost: free, but the MP is consumed on use.

Procedure

1. An enemy TF moves into or through the MP's patrol zone. Declare the MP is reacting for detection (5.3.4.1).
2. Resolve a TF detection roll per the procedure for MP detection in 6.1.

PA-BLOCK · pa4:detection-of-tfs — Detection of TFs (by MP, RORSAT, Tattletale)

3. On success, apply a Poor Detection marker, or upgrade an existing Poor to Good (6.1.1).
4. Flip the MP's On Patrol marker to Spent and return it to base (5.3.4.1).

Miscellaneous Actions

14 actions in this group

Rule refs: (4.2.2.1) (9.1.1)

When does this come up?

The Soviet player has accumulated First Strike Points from card play or end-of-turn SSBN payload checks (9.1.1) and chooses to spend one for a powerful in-game effect. FSPs are spent during the Soviet player's own action — does not count as an action and costs no OPS (4.2.2.1).

Procedure

1. On your action, declare you are spending one or more First Strike Points (4.2.2.1).
2. Reduce the First Strike Points marker on the track by the appropriate amount.
3. Apply the chosen FSP effect per 9.1.1.

PA-BLOCK · pa8:first-strike-points — First Strike Points (spending options)

4. Play continues — this is not an action, so the next action belongs to you (or your opponent under the standard alternation).

See also

- [Soviet Spy for SSBN evasion](#)
- [Use a Soviet Spy](#)
- Related rules: (4.2.2.1), (9.1.1), (9.1.2)

Why and what to watch for

Rule refs: (4.2.2.5)

When does this come up?

You want to fire a (non-Reaction) event from a card sitting in your hand — one you have NOT spent on OPS this turn. This is allowed at a premium: pay 2 OPS surcharge on top of the event's printed cost (4.2.2.5).

Procedure

1. On your action, declare you are playing the top (non-Reaction) event from a card in your hand (4.2.2.5).

PA-BLOCK · pa2:use-when-active — Use When Active (not an action)

2. Pay the event's printed OPS cost **plus** 2 additional OPS.
3. Resolve the event per the card text.
4. Place the card in the discard pile, or remove it from play if the event instructs you to.
5. If your hand drops below three cards as a result, draw up to three (4.2.3.6).

See also

- Play an event on one of your OPS cards
- Play a Reaction event from hand
- Related rules: (4.2.2.5), (4.2)

Why and what to watch for

Rule refs: (4.2.2.3) (4.2)

When does this come up?

Each turn each player will play two cards for OPS (4.2.2.3). Each card has one event printed on it — playable for the event's printed OPS cost. The cards you used for OPS this turn become available as event cards on your action. Either card's event may be played when active (and does not count as an action by itself, though it does cost OPS).

Procedure

1. On your action, declare you are playing one of your two OPS cards' (non-Reaction) events (4.2.2.3).

PA-BLOCK · pa2:use-when-active — Use When Active (not an action)

2. Pay the event's printed OPS cost from your remaining OPS pool.
3. Resolve the event per the card's text.
4. Each card can be used only once per turn unless the event text specifies otherwise.

See also

- Play a hand card's event for +2 OPS
- Play a Reaction event from hand
- Related rules: (4.2), (4.2.2), (4.2.2.3)

Why and what to watch for

Rule refs: (4.2.2.2) (9.3)

When does this come up?

The Soviet player has spies remaining on the Soviet Spies Track and chooses to spend one. Spies provide a menu of effects (place a Poor Detection on a NATO TF, take the SSBN Hunting marker, re-roll up to 3 ASW dice, or auto-succeed on First Strike sub evasion in a zone) (9.3).

Procedure

1. On your action, declare you are spending a Soviet spy (4.2.2.2).
2. Choose one effect from 9.3:
 - Place a Poor Detection marker on any NATO Task Force.
 - Take the SSBN Hunting marker.
 - Re-roll up to three ASW dice rolled (one re-roll per unit maximum).
 - Automatically succeed on all First Strike submarine evasion rolls in a single zone.

PA-BLOCK · pa8:soviet-spies — Soviet Spies (effects menu)

3. Apply the chosen effect immediately.
4. **Infiltration check:** roll a die and reference the current box on the Soviet Spy Infiltration Track. If the die falls within the box's indicated range, a spy has been caught — move the track down one box (to the left). This may reduce future spy availability.

Why and what to watch for

act-anytime-draw-card.md

Rule refs: (4.2.3.4) (2.3.6) (7.2)

When does this come up?

An enemy submarine crosses a Hydrophone Barrier shown on the map: the GIUK Gap (East 6, East 9-10, North 3-4), the English Channel (East 4), or the Strait of Gibraltar (Med 1-2). NATO can react with whatever Fresh or On-Patrol unit happens to be sitting in the entered or exited zone (2.3.6). This is the SOSUS feature in game terms.

Procedure

1. A submarine crosses a Hydrophone Barrier. Declare the reaction (2.3.6, 4.2.3.4).
2. Choose one of three options:
 - **Option 1 — Free single die:** a Fresh or On-Patrol friendly unit in the entered/exited zone rolls one die on the ASW table against the submarine, adding the unit's Tactical Value. **No** Spent marker applied — this is free.
 - **Option 2 — Full ASW attack:** the same unit rolls a normal ASW attack with **+1 die** as though attacking the sub. After resolving, mark the unit Spent.
 - **Option 3 — Local helo asset** (English Channel and Strait of Gibraltar only): use the permanent 2-dice helo asset, rolling as though it were an MP unit (apply Bad Weather and (N) modifiers normally). Used **instead of** one of the other two options.
3. Apply Bad Weather: weather in the zone the submarine is moving INTO matters (not the one moving out of). Option 3's helo asset is reduced to zero dice in Bad Weather.
4. Resolve the ASW roll per 7.2.1 — the "Hydrophone Interruption" line in the ASW DRM table applies here (+1 die or roll 1 die and not spent, optional always-one-die for submarines).

PA-BLOCK · pa3:anti-submarine-warfare — Anti-Submarine Warfare (Hydrophone Interruption DRM in DRM table)

5. A single sub can be re-rolled against by each different Fresh unit in the zone using Option 1 — every Fresh unit gets a free shot.

ACTION

6 OPS

NATO

MISC-ACTIONS

Rule refs: (5.4.4) (8.4.5) (2.2.4.1)

When does this come up?

Cuba begins as an inactive Soviet ally — it shelters the Lourdes intelligence station, allows limited Soviet basing, and supports Cuban air units and a submarine. The NATO player may pay 6 OPS to attack and activate Cuba (5.4.4, 8.4.5). After the attack, Cuban Soviet forces become available to the Soviet player.

Procedure

1. Spend 6 OPS (NATO only) and declare the attack on Cuba (5.4.4).
2. The Soviet player deploys the Cuban submarine: on a roll of 8+, deploy within one zone of Cuba; otherwise it begins in port. Deploy Cuban Air Units on Cuba with the SAM marker (8.4.5).
3. NATO may resolve up to 3 OPS worth of submarine or Task Force cruise missile attacks against Cuba — these are **free** (no additional OPS cost).
4. Place the four US units marked 'Cuba' in Florida and fly an immediate Strike mission with them against Cuba.

PA-BLOCK · pa5:air-units-transit-to-a-zone — Air Units · Transit to a Zone

PA-BLOCK · pa6:air-units-bombing-land-targets — Air Units Bombing Land Targets

PA-BLOCK · pa6:sam-suppression-sead-bombing — SAM Suppression (SEAD) · vs Bombing

PA-BLOCK · pa6:sam-attack-bombing — SAM Attack · vs Bombing

PA-BLOCK · pa6:bombing-air-to-ground — Bombing (air-to-ground)

5. Resolve damage to the Lourdes Facility per 2.2.4.1 (loss of Lourdes triggers RORSAT consequences).

6. Cuba is now active. The Soviet player may use Cuban forces as his own, and may immediately deploy up to three air units from any Soviet base to Cuba (all marked 'Spent').

act-misc-demine-port

ACTION

2 OPS

MISC-ACTIONS

Rule refs: (5.4.2)

When does this come up?

A friendly port has been mined and you need to clear it to allow ship traffic. Spending 2 OPS attempts to step the minefield down one level. Heavy mining → Light mining → Unmined (5.4.2).

Procedure

1. Spend 2 OPS and select one mined friendly port.
2. Roll a die. Required result depends on facility damage:
 - **Undamaged facility:** 5+ succeeds.
 - **Damaged facility:** 7+ succeeds.

PA-BLOCK · pa2:miscellaneous — Miscellaneous (de-mine roll thresholds)

PA-BLOCK · pa7:port-mines — Port Mines (what the minefield does)

3. On success, reduce the minefield by one level. Remove the Mine marker entirely if the port reaches Unmined.
4. On failure, the action is wasted but may be retried on a future activation.

When does this come up?

The Soviet player wants to extend or reposition satellite coverage. RORSATs are Soviet reconnaissance satellites used to detect NATO Task Forces. They start on the ground at Tyuratam and can be launched into space (5.4.3, 2.2.4.1).

Procedure

1. Spend 2 OPS (Soviet only). Choose to either:
 - Launch a RORSAT from Tyuratam into a Sea Zone, or
 - Move a RORSAT already on the map to a different zone.
2. Roll a die. On a result of 1, the action fails catastrophically — the satellite is destroyed and placed in the Destroyed box (2.2.4.1).

PA-BLOCK · pa2:miscellaneous — Miscellaneous (RORSAT cost, destroy-on-1, stack-at-4 rules)

3. On any other result, place the RORSAT in the target zone.
4. **Stacking:** RORSATs can be newly stacked together only if there are at least four already in play. Once 4+ are aloft, any further launches/moves may stack. Stacked RORSATs roll more detection dice (1 die per RORSAT present).
5. Note: RORSATs may also be lost as collateral damage to Soviet facilities (7.5.3). If Lourdes is destroyed (8.4.5), one RORSAT is permanently removed and another temporarily removed.

Why and what to watch for

Rule refs: (5.1.1.2)

When does this come up?

Two Task Forces are in the same Sea Zone and you want to shuffle units between them — typically to consolidate damaged ships, peel off escorts, or break apart a force without spending the 2 OPS to form a brand new TF (5.1.1.2).

Procedure

1. Spend 1 OPS. Select source and destination Task Forces — they must be in the same Sea Zone (5.1.1.2).
2. Move any units from the source TF to the destination TF (or to multiple destination TFs) as desired.
3. **Detection propagation:** a unit moved from a detected force grants the detection status of the originating TF to the destination TF — unless the destination already has a higher status.

PA-BLOCK · pa4:detection-of-tfs — Detection of TFs (Poor / Good states)

4. Each remaining TF must still contain at least one Surface Unit (5.1.2). Empty TF markers return to the Task Force display.
5. The TFs may become Slow or Fast depending on whether (S) slow units are present after the swap.

ACTION

0 OPS

MISC-ACTIONS

Rule refs: (5.4.5) (4.2)

When does this come up?

You have fewer Operations Points than your opponent and would rather wait for them to commit. Passing burns the action slot at zero cost so the opponent must play next, after which you get another chance to act (5.4.5).

Procedure

1. Verify your remaining OPS total is less than your opponent's (5.4.5).
2. Declare Pass. No OPS is spent.
3. The opponent plays the next action.
4. Play returns to you for another action choice. You may pass again if the OPS imbalance still holds.

ACTION

2 OPS

MISC-ACTIONS

Rule refs: (5.4.1) (2.3.8.4)

When does this come up?

A facility (port, airbase, etc.) has taken damage. Spending 2 OPS removes one Hit; if the removal would change the damage status (Heavy → Light, Light → Undamaged), a die roll is required (5.4.1).

Procedure

1. Spend 2 OPS and select one damaged facility.
2. Remove one Hit marker from the facility.
3. If removing this Hit would change the damage status, roll a die. Result of 5+ confirms the status change. On 1-4, the action is wasted (the Hit is still removed but the status does not improve).

PA-BLOCK · pa6:facility-damage — Facility Damage · Effects cumulative

4. See (2.3.8.4) for the effects of facility damage on hosted units.
